

Controllable Sputum Suction Tube

陕械注准20192080031

Product features

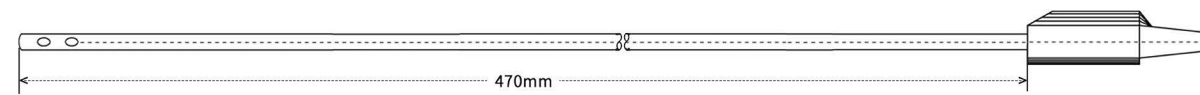

- Manual negative pressure suction device for intermittent sputum suction.
- Product is silicified. The tip is blunt and has side holes, which will not damage the airway mucosa.
- The product is equipped with sterile vials to facilitate the delivery of samples for inspection.
- Individual packaging, ethylene oxide sterilization, single use.

Clinical guideline

- For patients unable to expectorate on their own, patients in coma, and patients undergoing tracheotomy or endotracheal intubation.
